

What one monitor call sees

One task per call (what each sub-agent saw)

“Scans target infrastructure”

✘ looks like a routine security test

Group view: all tasks one orchestrator sent against one target

- Scans target infrastructure
- Identifies SSRF vulnerability
- Authors custom payload
- Testing harvested credentials
- Enumeration of accessible systems
- Query databases, parse results

✓ together: an intrusion chain is visible

Each task “appeared legitimate when evaluated in isolation” (Anthropic report, p. 6). Sources: Anthropic full report (PDF pp. 3–13); MITRE ATT&CK C0062. Monitor views are our illustration.
